Discussion findings

Lightning talks presenting our OSSD (Open Space-Style Discussion) Sessions

Thanks to the amazing attendees who came to a conference and were told in the morning that not only did we have to carve out what our industry means when we talk about observability, but also throw together a slide deck about it by the end of the day. This is what we made together.

Making Observability Easier to Implement

Summary

How do you observe a monolith?

- When does the observability happen? When's an observable event? When do you log or sample a thing? Every request? Granularity?
- What's in an event?
- How to determine an event ex post facto?
- Where do events go? Does it matter if you drop things?
- How do we add events to our app? Literally how do we do this

Call to action

Observability is a process!

(it is not an end state)
